Abstracts

Mercury removal carbon refers to a specialized category of activated carbon products that have been chemically impregnated or physically modified to enhance their ability to adsorb elemental mercury (Hg?) and oxidized mercury compounds (Hg??) from industrial gas streams, with applications primarily in coal-fired power plants, waste incineration facilities, cement production, and natural gas processing. These carbons typically feature high surface areas and are treated with reactive agents such as sulfur, halogens, or metal oxides to promote chemisorption, enabling efficient mercury capture even at low concentrations and elevated temperatures, thereby helping industries comply with stringent environmental regulations aimed at reducing mercury emissions.
