Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Mesalazine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Mesalazine also known as mesalamine, or 5-aminosalicylic acid (5-ASA), is a medication used to treat inflammatory bowel disease, including ulcerative colitis and Crohn's disease. It is generally used for mildly to moderately severe disease. It is taken by mouth or rectally. The formulations which are taken by mouth appear to be similarly effective. In 2024, global Mesalazine sales reached approximately 5,417 tons, with an average global market price of around US\$ 35.0 per kg. The global prevalence of IBD is rising, particularly in developed regions like North America and Europe, and increasingly in developing nations such as China and India. This increase is largely attributed to changes in lifestyle, dietary habits, and environmental factors, which are contributing to the growing demand for mesalazine. With ulcerative colitis being the primary indication for mesalazine, the growing number of patients with this condition is directly driving market demand. Global key players of Mesalazine are Syntese A/S, PharmaZell and Cambrex Corporation etc. The top 3 companies hold a share over 50%. The global Mesalazine are mainly produced in Europe and United States, they occupied for a share over 60%. Europe is the largest market, has a share about 43%, followed by Asia Pacific and North America, with share 31% and 12%, separately.

The global Mesalazine market size was estimated at USD 190.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
