## Abstracts

MCMB (mesocarbon microbeads) synthetic graphite is prepared from petroleum pitch or coal tar. MCMB is one of the promising carbon anode materials for Li-ion batteries. MCMB has high specific capacity and a spherical morphology, which is beneficial for high packing density of the anode. The low surface area of MCMB can minimize the unfavorable side reactions during the charge-discharge process. Global key players of mesocarbon microbeads include BTR New Material Group, Baotailong New Materials, China Steel Chemical, etc. Global top three manufacturers hold a share over 72%. The key players are mainly located in China, Japan and Taiwan. In terms of product, direct thermal condensation is the largest segment, with a share over 81%. And in terms of application, the largest application is battery anode material, with a share over 63%.

The global Mesocarbon Microbeads market size was estimated at USD 206.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.70% during the forecast period.
