## Abstracts

Mesoporous silica (MS) is a nanotechnological advancement, comprised of a honeycomb-like structure of silica, with a large number of empty channels (mesoporous) that entrap bioactive molecules. mesoporous silica nanoparticles have many applications in medicine, biosensors, thermal energy storage, water/gas filtration and imaging. Global Mesoporous Silica key players include Merck, Taiyo Kagaku, W.R.Grace, Nanocomposix and Mknano. Global top five manufacturers hold a share about 70%. Asia-Pacific is the largest market, with a share about 35%, followed by North America and Europe, with shares about 30% and 25% separately. In terms of product type, M41S Series is the largest segment, with a share about 45%. And in terms of product application, the largest application is Catalysis, followed by Drug Delivery. Application fields and market demand

**Catalysis field:** Mesoporous silica can be used as a catalyst carrier to improve the activity and selectivity of catalytic reactions due to its high specific surface area and regular pore structure. In the chemical industry, it is widely used as a catalyst for the synthesis of various chemicals.

**Drug delivery and biomedicine:** Mesoporous silica shows great potential in drug delivery, bioimaging and other fields. Its surface can be modified with functional groups to adapt to different biological environments. As a drug release carrier, mesoporous silica can achieve controlled release and targeted delivery of drugs.

**Environmental protection and water treatment:** As an adsorbent, mesoporous silica can effectively adsorb pollutants such as heavy metal ions and organic matter in water, providing support for environmental protection and water treatment.

**Other applications:** Mesoporous silica can also be used in separation, electronic devices, molecular imaging and other fields. With the deepening of research, its application scenarios will be further expanded. With the advancement of science and technology and the continuous expansion of application fields, the research and application of mesoporous silica will continue to deepen. In the future, mesoporous silica may develop in the direction of higher performance and more

functionalization.

The global Mesoporous Silica market size was estimated at USD 218.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
