Report Overview

Message Queue (MQ) Software is a type of software that enables asynchronous communication between different applications or parts of the same application. Asynchronous communication means that the sender and the receiver of a message do not have to be online or available at the same time. The message is stored in a queue until the receiver is ready to process it. Messages can consist of requests, replies, alerts, or any other data that needs to be exchanged between systems. Message Queue Software facilitates service-to-service communications by storing, processing, and deleting messages as they are completed. Some Message Queue Software tools use the publisher/subscriber pattern, which allows multiple receivers to subscribe to the same message source. Message Queue Software is typically used by IT professionals, system administrators, and software developers to coordinate distributed applications, simplify coding disparate applications, improve performance, and automate communication-related tasks.

The global Message Queue (MQ) Software market size was estimated at USD 352 million in 2023 and is projected to reach USD 636.33 million by 2032, exhibiting a CAGR of 6.80% during the forecast period.
