Abstracts

MET inhibitor drugs are a class of pharmaceutical agents designed to target and inhibit the activity of the MET receptor tyrosine kinase. The MET receptor, also known as c-MET or hepatocyte growth factor receptor (HGFR), plays a crucial role in cell growth, proliferation, migration, and survival. Abnormal activation or overexpression of MET is often associated with cancer development and progression, making MET inhibitors a promising approach in cancer therapy. The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs.
