Abstracts

Aramid fiber, the full name of which is "aromatic polyamide fiber", is a new type of high-tech synthetic fiber with excellent properties such as ultra-high strength, high modulus, high temperature resistance, acid and alkali resistance, and light weight. Its strength is 5-6 times that of steel wire, its modulus is 2-3 times that of steel wire or glass fiber, its toughness is 2 times that of steel wire, and its weight is only about 1/5 of that of steel wire. It does not decompose or melt at a temperature of 560 degrees. It has good insulation and anti-aging properties and has a long life cycle. Meta-aramid, full name poly-m-phenyleneisophthalamide, alias aramid 1313, is a high-performance synthetic fiber. It has excellent properties such as no molten droplets when exposed to fire, self-extinguishing when away from fire, super wear resistance, softness and comfort, and is one of the most in line with national standards. Meta-aramid also has excellent thermal stability, flame retardancy, electrical insulation, chemical stability and radiation resistance. These characteristics make meta-aramid widely used in the field of personal protection. With the development of social economy and the improvement of people's safety awareness, as well as the promotion and practice of the concept of "decent labor", the demand for meta-aramid for personal protection has shown a high growth trend. Meta-aramid can be used to make personal protective equipment such as fire suits, military uniforms, and heat-resistant work clothes. Meta-aramid has a substitution relationship with other synthetic fibers (such as nylon, polyester, etc.), but in some special application fields (such as extreme environments such as high temperature and high pressure), the performance advantages of meta-aramid make it irreplaceable. Meta-aramid for personal protection is a fiber material used in personal protective equipment, also known as aramid fiber for personal protection. Meta-aramid fiber for personal protection is widely used in personal protective equipment such as bulletproof vests, stab-proof clothing, fire-resistant clothing, and chemical protection clothing. It can provide effective protection and protect the human body from external threats and

dangers. At the same time, meta-aramid fiber also has good breathability and comfort, allowing the wearer to stay dry and comfortable at work. The meta-aramid industry for personal protection has the characteristics of high investment threshold, high technical difficulty, and high production equipment requirements, which makes the supply of the entire aramid industry highly concentrated. The core manufacturers of meta-aramid for personal protection in the world are Dupont, Yantai Tayho Advanced Materials, Teijin, and X-FIPER New Material, among which the largest manufacturer accounts for about 55% of the market share. The production of meta-aramid for personal protection is mainly distributed in North America and China, and these two regions account for about 60% of the market share.

The global Meta-aramid for Personal Protection market size was estimated at USD 307.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.70% during the forecast period.
