## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Meta-aramid Dry Spinning competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Meta-aramid Dry Spinning production reached approximately 22,722 MT, with an average global market price of around US\$ 18.2 per kg. Meta-aramid fiber, also known as poly(m-phenylene isophthalamide) (PMTA), is also known as aramid 1313 in my country. Meta-aramid fiber is the fastest-growing organic high-temperature-resistant fiber. The fiber molecules are composed of meta-phenyl groups linked by amide groups, resulting in a linear, zigzag chain. Due to strong intermolecular hydrogen bonding, the fiber exhibits excellent flame retardancy, thermal stability, and radiation resistance. Dry spinning directly extrudes high-concentration spinning solution into filaments, eliminating the solvent recovery step required in wet spinning. This process offers the advantages of high spinning speeds, high fiber orientation, and suitability for filament production. This process places high demands on the spinning equipment, typically using a small number of spinneret holes to achieve high orientation.

The global Meta-aramid Dry Spinning market size was estimated at USD 415.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
