Report Overview

Metal denture materials include pure gold and alloys, alloys such as cobalt-chromium alloys, nickel-chromium alloys, and copper alloys. The stainless steel wire commonly used in the production of denture snap rings is one that has been forged. The commonly used materials for making metal dentures are non-precious metal materials such as nickel-on-chromium alloy and alumina, which have the advantage of being strong and durable. However, the biocompatibility is poor and the gums are prone to discoloration. Dentures made of this material are particularly affordable and are now widely used.

The global Metal-Base Dentures market size was estimated at USD 451 million in 2023 and is projected to reach USD 636.38 million by 2032, exhibiting a CAGR of 3.90% during the forecast period.
