Abstracts

Metal bellows accumulators are hydraulic or pneumatic energy storage devices that utilize a hermetically sealed, flexible metal bellows to separate a pre-charged gas chamber from the process fluid, enabling them to absorb pressure fluctuations, dampen pulsations, compensate for thermal expansion, and provide emergency energy in systems where contamination or fluid incompatibility with elastomers is a concern, making them critical in high-performance, high-purity, or extreme-temperature applications such as aerospace, semiconductor manufacturing, medical devices, nuclear power, and oil and gas, where reliability, compactness, and resistance to harsh environments are paramount.

The global Metal Bellows Accumulator market size was estimated at USD 285.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
