Report Overview

Metal brake discs are high-performance automotive brake materials, usually made of materials such as steel, cast iron, or alloy. Compared with traditional friction materials, metal brake discs have better heat resistance, wear resistance, and fade resistance, providing more reliable braking effects during high-speed driving and severe braking. Metal brake discs are mainly used in high-end car models and racing fields to meet the requirements for high-performance and high-quality braking systems. Semi metal brake pads mainly use rough steel wool as reinforcing fibers and important mixtures. In terms of braking efficiency, it is very stable and has good thermal stability. In terms of appearance (fine fibers and particles), it is easy to distinguish asbestos free organic brake pads (NAO).

The global Metal Brake Discs market size was estimated at USD 1058.40 million in 2023 and is projected to reach USD 1586.48 million by 2032, exhibiting a CAGR of 4.60% during the forecast period.
