## Abstracts

A metal check valve is a valve designed to prevent backflow of fluids, typically made from metal materials such as stainless steel or cast iron. It operates automatically by opening the valve flap in the direction of flow when the fluid pressure is sufficient, and closes when the fluid attempts to flow backward, thereby preventing backflow. Metal check valves are commonly used in fluid systems that involve high pressure, high temperature, or corrosive media, offering high durability and sealing performance. They are widely applied in industries such as oil and gas, chemical, power, and water treatment.

The global Metal Check Valve market size was estimated at USD 2373.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.50% during the forecast period.
