## Abstracts

Metal-faced E-type seals are specially designed metal sealing elements with an E-shaped cross-section structure. They are usually made of metal materials and are suitable for sealing requirements under high temperature, high pressure and harsh working conditions. The sealing effect is achieved through close contact and compression deformation between metal surfaces, which can effectively prevent fluid leakage and is especially suitable for pipe and equipment connections in industries such as petroleum, natural gas, and chemicals. E-type seals are widely used in high-pressure systems that require long-term reliable sealing due to their good pressure resistance, corrosion resistance, and high temperature resistance.

The global Metal E-Seals market size was estimated at USD 395.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
