## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Metal Film Analog Potentiometers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A metal film analog potentiometer is a type of electronic component. It is composed of a resistive element made of metal film, which is deposited on an insulating substrate. The potentiometer has three terminals: two fixed - end terminals and one movable terminal (wiper). By rotating or sliding the movable terminal along the resistive element, the resistance ratio between the fixed - end terminals and the movable terminal can be continuously changed. This allows it to function as a voltage divider, providing a continuously variable output voltage that is proportional to the position of the movable terminal. Metal film analog potentiometers are widely used in various electronic circuits for applications such as volume control in audio equipment, brightness adjustment in displays, and parameter tuning in measurement and control systems due to their relatively stable performance, good linearity, and long - term reliability.

The global Metal Film Analog Potentiometers market size was estimated at USD 396.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
