## Abstracts

Metal film MELF resistors are highly reliable resistors that primarily function to impede the flow of electric current in a circuit. They have a more predictable pulse handling capacity compared to other SMD resistors, with tolerances as low as 0.1%. Moreover, they can be manufactured with extremely low temperature coefficients, sometimes as low as 5 ppm/°C, which enables them to operate stably in various environments and working conditions. Their superiority lies in the cylindrical structure, which provides the best rated power and pulse load capacity in relation to the installation space. Overall, metal film MELF resistors are electronic components with excellent electrical performance, thanks to their high reliability, precise performance, and unique structural advantages.

The global Metal Film MELF Resistors market size was estimated at USD 460.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
