Abstracts

Metal-free die-cut lids, also known as non-metallic die-cut lids, are a type of packaging material used to seal and cover containers, particularly in the food and beverage industry. These lids are designed as an alternative to traditional metal lids or caps, such as aluminum or steel, and are typically made from non-metallic, food-safe materials. Metal-free die-cut lids provide an airtight and tamper-evident seal for products while eliminating the use of metal, which can be advantageous for various reasons, including environmental considerations and product safety. Manufacturers are continuously researching and developing new materials that are non-metallic, food-safe, and environmentally friendly. These materials may include plant-based plastics, bio-composites, and advanced paperboard solutions. Innovations in material science are aimed at improving barrier properties, recyclability, and overall performance.

The global Metal Free Die Cut Lids market size was estimated at USD 453.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
