Abstracts

Metal Inert Gas (MIG) Welding Robot is an automated welding system that utilizes MIG welding technology, where an electric arc melts the welding wire while an inert gas (such as argon or helium) shields the weld to ensure high-quality joining. Equipped with advanced sensors, intelligent control systems, and welding path planning capabilities, the robot precisely regulates welding parameters to maintain consistency and enhance productivity. Compared to manual welding, MIG welding robots reduce human error, increase welding speed, and handle complex welding tasks, making them ideal for industries such as automotive manufacturing, shipbuilding, aerospace, and heavy machinery.

The global Metal Inert Gas Mig Welding Robot market size was estimated at USD 89.8 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 23.10% during the forecast period.
