Abstracts

Metal ion separation extractants are mainly seven common hydrogen ions or radicals such as phosphoric acid, salt, and benzene, which are replaced by some long-chain alkyl groups. When metals combine with these extractants, they turn into metal-organic compounds and dissolve in organic solvents. Due to the different binding abilities of various metals to these extractants, the order in which these extractants extract metals is different, thereby separating these metal ions. Transfer to another solvent.

The global Metal Ion Separation Extractant market size was estimated at USD 290.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.60% during the forecast period.
