Abstracts

Metal Kammprofile gaskets are specialized sealing components consisting of a solid metal core with concentric, wave-like grooves (known as a kammprofile) and a soft, conformable filler material, such as graphite or PTFE, laminated onto the sealing surfaces; they are engineered to provide high-performance, reliable sealing in demanding industrial applications?particularly in flanged connections within the oil and gas, chemical processing, power generation, and heavy machinery sectors?where they offer advantages over traditional gaskets by combining the structural integrity and resilience of metal with the adaptability and leak-tightness of soft materials, enabling effective performance under extreme pressures, temperatures, and corrosive conditions.
