Abstracts

Metal Magnetic Powder Cores consist of soft-magnetic metallic powder, mostly iron and its alloys (mixed with nickel, molybdenum, silicon and others), embedded in a binder material. The powder mix is pressed into desired shapes, but as it is not sintered, grains stay isolated. As a result, all these cores contain a so-called distributed air gap resulting in low permeability and soft saturation behaviour. The different compositions of powder, grain size and densities of the particles within the core allow for a wide range of permeability (10 to 550) and other material properties.

The global Metal Magnetic Powder Core market size was estimated at USD 806.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.80% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Metal Magnetic Powder Core market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
