Report Overview

Additive Manufacturing with Metal Powders can produce metallic products through three - dimensional and printing technology. Now it is widely used in automotive industry, aerospace industry and medical industry. 3D printing of metals works by laying down metal powder. A high powered laser then melts that powder in certain precise locations based on a CAD file. Once one layer is melted, the printer will place another layer of metal powder on top, and the process repeats until an entire object is fabricated.

The global Metal Materials For Additive Manufacturing market size was estimated at USD 50.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 22.45% during the forecast period.
