Abstracts

Metal mining magnetic separator is a device used for the beneficiation of metal ores. It uses magnetic force to separate magnetic minerals from non-magnetic minerals in the ore, thereby improving the grade of the ore. It is widely used in the beneficiation operations of metal ores such as iron ore, bauxite, and manganese ore. Magnetic separators separate magnetic substances from ores by generating strong magnetic fields and utilizing the different magnetic differences between magnetic substances (such as iron ore, ilmenite, etc.) and non-magnetic substances (such as quartz, feldspar, barite, etc.) in ores. Usually, magnetic separators attract and collect magnetic minerals through rotating magnetic drums, rollers, or magnetic fields, and then separate them through corresponding cleaning devices.

The global Metal Mining Magnetic Separator market size was estimated at USD 538.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
