## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Metal and Compound Precursor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. It is the core manufacturing material of the semiconductor thin film deposition process. It has high barriers and high growth. It is used in the semiconductor manufacturing process. It has chemical thermal activity and forms a type of substance that meets the requirements of semiconductor manufacturing. The global metal and compound precursor market is accelerating its expansion along with the profound changes in semiconductor technology. Its core growth engines are advanced processes (especially 3nm and below logic chips), the surge in the number of high-capacity 3D NAND flash memory stacking layers, and the booming development of emerging storage technologies (such as MRAM, ReRAM) and advanced packaging (such as Chiplet, 3D IC). These cutting-edge applications have created explosive demand for ultra-high purity, specific performance metal precursors used in atomic layer deposition (ALD) and chemical vapor deposition (CVD) processes (such as zirconium/hafnium-based precursors for high-k dielectric/gate materials, cobalt/ruthenium/tungsten precursors for electrodes/interconnects, and metal oxide precursors for storage cells). Due to the extremely high technical barriers (involving complex synthesis, purification, formula design and strict certification), the market presents an oligopolistic competition pattern, dominated by international chemical giants (such as Entegris, Merck, Japan's ADEKA, and SK Material). In the next few years, driven by large-scale expansion of wafer fabs, continuous miniaturization of technology nodes (driving the development of new precursors), and regional supply chain construction under geopolitics (especially localization substitution in China), the market is expected to maintain strong growth (CAGR is significantly higher than the average level of the semiconductor industry).

However, the industry also faces challenges such as bottlenecks in the supply of high-purity raw materials, stringent environmental and safety regulations, huge R&D investment pressure, and the risk of potential changes in technology routes.

The global Metal and Compound Precursor market size was estimated at USD 1815.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.60% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Metal and Compound Precursor market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
