Abstracts

A metal nibbler is a tool used to cut sheet metal, and is widely used in industries such as metal processing, auto repair, and construction. It works by moving an electrically driven blade rapidly along the metal surface, using repeated impact and cutting action to achieve precise cutting. Unlike traditional scissors or saws, the blade of a Metal Nibbler has multiple small teeth (i.e., "punches"), and through the alternating movement of these teeth, metal materials can be efficiently cut without generating excessive heat and deformation. Metal Nibblers can generally cut a variety of metals such as aluminum, steel, and stainless steel, and are capable of complex curve or straight line cutting, and are suitable for thin to medium-thick metal sheets.

The global Metal Nibbler market size was estimated at USD 473.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
