## Abstracts

Metal-out static shielding bags are specialized protective packaging designed to prevent electrostatic discharge (ESD) from damaging sensitive electronic components, while also offering enhanced durability and protection. Unlike traditional static shielding bags with an inner metal layer, these bags feature the metalized layer on the outer surface, providing superior shielding against external static and electromagnetic interference. The inner layer typically consists of a dissipative material that protects the contents from static buildup. These bags are commonly used in the electronics industry for packaging and transporting components like semiconductors, circuit boards, and other delicate devices that are sensitive to ESD.

The global Metal-Out Static Shielding Bags market size was estimated at USD 151.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
