Abstracts

Metal packaging materials refer to rigid or semi-rigid containers, components, and closures made primarily from metals such as aluminum, steel, tinplate, and tin-free steel, engineered to preserve, protect, and present a wide range of products including food, beverages, aerosols, chemicals, and personal care items. These materials are valued for their exceptional barrier properties, which prevent oxygen, light, and moisture from compromising product integrity, as well as their durability, recyclability, and ability to be shaped into diverse forms like cans, tubes, drums, and caps. The market encompasses both primary packaging, which comes into direct contact with the product, and secondary or tertiary packaging used for grouping and transportation, with innovations focusing on lightweighting, enhanced sustainability through recycled content, and advanced coatings to improve compatibility with sensitive contents.

The global Metal Packaging Materials market size was estimated at USD 153450.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
