Abstracts

Metal password padlocks are security devices that utilize a numerical combination mechanism instead of a traditional key, offering keyless access through a customizable PIN entered on a built-in dial or keypad, often constructed from durable materials such as zinc alloy, hardened steel, or brass to provide resistance against physical tampering, weather conditions, and forced entry. These locks are commonly used for securing lockers, storage units, gates, luggage, and bicycles, combining the convenience of memorized access with the robustness of metal construction to cater to both consumer and light commercial security needs.
