Abstracts

Metal-plastic composite bearings, also known as polymer bearings or self-lubricating bearings, are a type of bearing that combines the properties of metals and plastics. They are typically constructed with a metal backing for strength and a plastic composite lining, often made of materials such as polyoxymethylene (POM), nylon, or other high-performance polymers. This design merge the durability, load-bearing capacity of metal with the low friction, corrosion resistance, and lightweight characteristics of plastics.

The global Metal-plastic Composite Bearings market size was estimated at USD 681.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
