Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Metal-polymer Self-lubricating Composite Bearings competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Metal-polymer self-lubricating composite bearings are bearings composed of a metal substrate combined with a polymer friction layer. The metal provides high load-bearing capacity and structural strength, while the polymer layer (such as PTFE or reinforced resin) offers low friction and self-lubricating properties during operation, reducing the need for external lubricants. These bearings are suitable for high-speed, low-noise, and long-term maintenance-free applications. In 2024, the global production of metal-polymer self-lubricating composite bearings is projected to reach 848 million units, with an average price of 0.65 USD per unit.

The global Metal-polymer Self-lubricating Composite Bearings market size was estimated at USD 551.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
