Report Overview

Metal Powder injection molding (MIM) is a metalworking process in which finely-powdered metal is mixed with binder material to create a 'feedstock' that is then shaped and solidified using injection molding. The molding process allows high volume, complex parts to be shaped in a single step. After molding, the part undergoes conditioning operations to remove the binder and densify the powders. Finished products are small components used in many industries and applications.

The global Metal Powder Injection Molding (MIM) market size was estimated at USD 3776.20 million in 2023 and is projected to reach USD 9427.22 million by 2032, exhibiting a CAGR of 10.70% during the forecast period.

North America Metal Powder Injection Molding (MIM) market size was estimated at USD 1172.73 million in 2023, at a CAGR of 9.17% during the forecast period of 2024 through 2032.
