Abstracts

Metal rapid prototyping service is an advanced manufacturing technology, which is developed based on the integration of modern CAD/CAM technology, laser technology, computer numerical control technology, precision servo drive technology and new material technology. This service mainly uses three-dimensional data models to generate the contour data of each layer of cross section by layered slicing, and then uses lasers or nozzles and other devices to selectively sinter, solidify, cut or spray metal powder, liquid metal or other metal-based materials, so that they are stacked layer by layer and finally form the required three-dimensional solid product or model.
