Abstracts

Metal recycling balers are industrial machines designed to compress and bind various types of scrap metal?such as steel, aluminum, copper, and other non-ferrous metals?into dense, manageable bales or blocks to optimize transportation, storage, and processing efficiency. These systems typically employ hydraulic pressure to compact loose or fragmented metal scrap, reducing volume significantly and creating uniform bales that meet industry specifications for melting or resale. Balers vary in size, capacity, and automation level, ranging from smaller vertical models for lower-volume operations to large, fully automated horizontal systems integrated into high-throughput scrap yards and recycling facilities.

The global Metal Recycling Baler market size was estimated at USD 1250.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
