## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Metal Repair and Rebuilding Compounds competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Metal Repair and Rebuilding Compounds production reached approximately 11070 tons with an average global market price of around US\$ 145 per kg. Metal Repair and Rebuilding Compounds are specialized polymer-based materials, usually epoxy or resin systems, engineered to restore the structural integrity, surface properties, and functionality of damaged, worn, or corroded metal components. These compounds provide a cost-effective and time-efficient alternative to traditional welding or part replacement, allowing repairs to be conducted in situ without dismantling equipment. They are formulated with metallic fillers, ceramic reinforcements, or other performance-enhancing additives to achieve high mechanical strength, wear resistance, corrosion protection, and adhesion to metal substrates. The compounds cure either at ambient or elevated temperatures to form a durable, machinable, and long-lasting bond that can withstand mechanical loads, chemical exposure, and thermal cycling.

The global Metal Repair and Rebuilding Compounds market size was estimated at USD 1605.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
