Abstracts

Metal roof deck products are structural components typically fabricated from cold-formed steel, galvanized or coated for corrosion resistance, and designed to serve as a form for concrete slabs in composite floor and roof systems, providing both structural support and a working platform during construction while contributing to the overall load-bearing capacity, fire resistance, and durability of buildings, particularly in commercial, industrial, and institutional applications where long spans, high loads, and fast construction schedules are prioritized. The market for these products is driven by demand in non-residential construction sectors, including warehouses, data centers, manufacturing plants, and high-rise buildings, with growth influenced by trends toward sustainable building practices, the need for energy-efficient designs, and the expansion of industrial and logistics infrastructure globally, though it remains sensitive to fluctuations in raw material costs, regulatory standards for safety and sustainability, and overall economic conditions affecting construction investment.

The global Metal Roof Deck Product market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
