## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Metal Seals for Nuclear competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Metal seals for the nuclear industry are sealing components designed for extreme working conditions (high temperature, high pressure, strong radiation, corrosive media) in nuclear energy systems. They are usually used in key parts such as reactors, fuel processing, and waste packaging. Its core function is to achieve zero leakage sealing at static or dynamic connection parts to prevent the leakage of radioactive materials and ensure the safe operation of nuclear facilities. Compared with traditional seals, nuclear-grade metal seals must meet higher sealing levels (such as  $10^{10}$  Pa·m/s), longer life cycles (usually required to be  $>60$  years), and stronger radiation resistance, corrosion resistance, and thermal cycle stability. Common materials include Inconel, Hastelloy, titanium alloy, stainless steel, etc., and the surface is often supplemented with silver plating, gold plating, PTFE or ceramic coating to improve sealing performance.

The global Metal Seals for Nuclear market size was estimated at USD 1315.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
