## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Metal Soft Magnetic One-piece Molded Inductors competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. With the continuous development of electronic technology, miniaturization and integration have become the mainstream trend of electronic components. In this context, chip inductors, as an important miniaturized electronic component, play a vital role in integrated circuits. The main function of chip inductors is to store and convert electrical energy, and through their unique electromagnetic induction characteristics, they can realize the transmission and regulation of voltage, current and energy in the circuit. High-performance chip inductors are closely related to artificial intelligence computing power. In these high-performance chips, the voltage has dropped below 1V, while the power is increasing. Therefore, there is an urgent need for an inductor that can withstand large currents and is compact. Metal soft magnetic one-piece molded inductors will become the future development direction. Compared with traditional ferrite inductors, metal soft magnetic one-piece molded inductors have higher efficiency, smaller size, and can better respond to large current changes.

The global Metal Soft Magnetic One-piece Molded Inductors market size was estimated at USD 1105.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 41.50% during the forecast period.
