Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Metal Suture Anchor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Metal suture anchors are implants used for soft tissue-to-bone fixation, typically made of titanium alloy or stainless steel and pre-loaded with high-strength sutures. By implanting the anchor into the bone and using the sutures to pull and fix the soft tissue, stable fixation can be achieved for soft tissue reconstruction of joints, such as rotator cuff repair and ankle ligament repair. These products are characterized by high strength, strong pull-out resistance, and excellent fatigue resistance, and are widely used in sports medicine and arthroscopic surgery. The upstream of the industry chain includes medical titanium alloy rods, high-performance fiber sutures (such as DSM Dyneema?), precision machining equipment, and surface treatment service providers; the midstream consists of professional orthopedic companies with Class III medical device registration certificates, such as Smith & Nephew, Arthrex, Johnson & Johnson DePuy Mitek, and Daibo Medical, which need to master microstructure processing, suture-metal connection strength verification, and sterilization packaging technology; the downstream mainly targets sports medicine departments, orthopedic specialty hospitals, and high-end private medical institutions, entering clinical practice through distributors or direct sales. In 2024, the global production of metal strip anchors was approximately 2,469,000 pieces, with an average price of US\$166 per piece. Major manufacturers had gross margins ranging from 48% to 65%, with a single production line capacity of 123,000 pieces per year.

The global Metal Suture Anchor market size was estimated at USD 410.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10%

during the forecast period.
