Abstracts

Metal tile trim is a decorative and functional strip made of metal materials, mainly used to finish the edges of tiles in construction and decoration projects. It can cover the cut edges of tiles, preventing them from chipping and wearing, thereby prolonging the service life of tiles. It provides a neat and beautiful appearance, enhancing the overall aesthetic of the tiled area. Metal tile trims come in various finishes, such as chrome-plated, brushed nickel, and matte black, which can match different decoration styles. In some cases, metal tile trims can help seal the edges of tiles, preventing water from seeping into the gaps and causing damage to the underlying structure. Metal tile trims are usually installed along the edges of tiles during the tiling process. They can be fixed to the wall or floor using adhesive or screws, depending on the type of trim and the substrate.

The global Metal Tile Trim market size was estimated at USD 2069.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
