## Abstracts

The metal tube float flowmeter is an instrument used to measure the flow of liquid or gas. Its working principle is based on the position change of the float in the tapered metal tube. When the fluid passes through the flowmeter, the float rises due to the force of the fluid, and its position is proportional to the flow rate. The flow value is read through the scale or sensor. The metal tube float flowmeter has the characteristics of simple structure, high reliability, high pressure resistance and corrosion resistance, and is widely used in chemical, petroleum, pharmaceutical, food and beverage and other industries.

The global Metal Tube Float Flowmeter market size was estimated at USD 560.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
