Report Overview

Metalized CPP (Cast Polypropylene) film is a specialized packaging material created by depositing a thin layer of aluminum onto a polypropylene substrate through vacuum metallization. This process enhances the film's barrier properties, making it resistant to moisture, oxygen, and light, while retaining flexibility, heat-sealability, and durability. It is widely used in food packaging, pharmaceuticals, and electronics due to its ability to extend shelf life, preserve product integrity, and provide a high-gloss aesthetic appeal. The film's versatility allows it to be laminated with other materials or printed on, making it suitable for flexible packaging applications such as pouches, lids, and wrappers. Its lightweight nature and cost-effectiveness compared to traditional foil-based packaging further contribute to its adoption across industries.

The global Metalized Cpp Film market size was estimated at USD 499.3 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
