## Abstracts

A metalworking nibbler is an electric or pneumatic tool designed specifically for cutting sheet metal. It uses a punch (blade) that moves up and down to gradually shear the metal, enabling it to accurately cut straight or curved lines without excessive deformation or burrs. This tool is suitable for a variety of metal materials such as stainless steel, aluminum, and copper, and is widely used in industries such as automotive manufacturing, sheet metal processing, construction installation, and aerospace. Compared to traditional cutting tools, nibblers do not generate high temperatures or sparks during operation, and can easily cope with the cutting needs of complex shapes, improving processing efficiency and precision.
