Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Methane Reducing Feed Additives competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Methane reducing feed additives are dietary supplements given to ruminant animals (such as cows, sheep, and goats) to lower the amount of methane produced during digestion. These additives work by targeting the microbes in the animal's stomach that generate methane as a byproduct of breaking down fibrous plant material. Common types include compounds like 3-NOP (3-nitrooxypropanol), red seaweed (*Asparagopsis* species), nitrate salts, and essential oils. By reducing methane emissions, these additives help improve feed efficiency and lower the environmental impact of livestock farming, contributing to climate change mitigation efforts. The product's production volume in 2024 was approximately 2,800 tons, with an average price of \$24 per kilogram. The upstream processes of feed additives for methane mitigation mainly involve the research, development, and production of active compounds that reduce enteric methane emissions in livestock, such as nitrates, essential oils, tannins, probiotics, or synthetic compounds like 3-NOP. This stage includes raw material sourcing, formulation, and manufacturing by chemical, biotechnological, or agricultural companies. The downstream processes encompass the distribution, integration, and application of these additives in livestock feed by feed mills, farmers, and dairy or meat producers. It also includes monitoring efficacy, regulatory compliance, and carbon accounting to measure emission reductions for sustainability reporting or participation in carbon credit schemes.

The global Methane Reducing Feed Additives market size was estimated at USD 69.14 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

16.90% during the forecast period.
