The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Methanol Engines competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A methanol engine is an internal combustion engine that uses methanol as fuel, belonging to the field of clean alternative fuel technology. Spark ignition engines are used in automotive engines, igniting the methanol-air mixture via a spark plug; compression ignition engines are used in low-speed marine engines, achieving spontaneous combustion of methanol through glow plugs or high-temperature compression. In 2024, the global production of methanol engines was approximately 4,678 units, with an average selling price of US\$10,750 per unit. The gross profit margin was approximately 31.8%. Production capacity is mainly developed in line with downstream automotive or marine industries, with downstream customers being methanol vehicle/marine companies.

The global Methanol Engines market size was estimated at USD 50.29 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 17.20% during the forecast period.
