Abstracts

Methanol-to-gasoline technology (MTG) uses methanol as raw material, and through a series of chemical reactions under the action of a catalyst, it is highly selectively converted into highly clean gasoline with no sulfur, no nitrogen, low benzene and low olefins. This process is a sustainable approach for producing gasoline-range hydrocarbon biofuels. It can also mitigate the challenges associated with crude oil, such as environmental pollution, scarcity and cost of fossil-derived fuels, and political instability in major crude oil-producing countries. Global key players of Methanol-to-Gasoline include TransGas Development Systems, ZeoGas, Fenghui Chemical, etc. The top three players hold a share over 60%. North America is the largest market, with a share of 68%, followed by Asia-Pacific which occupied for 24%. In terms of product type, Coal is the largest segment, with a share of 71%. And in terms of application, Passenger Car has a share of 56 percent.

The global Methanol-to-Gasoline market size was estimated at USD 5359.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.20% during the forecast period.
