Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Methanol-to-Jet (ATJ) Fuel competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Methanol-to-Jet (ATJ) Fuel production reached approximately 758 thousand tons, with an average global market price of around US\$ 1,950 per ton. The gross profit margin of major companies in the industry is between 25% ? 40%. Single-line production capacity is 20,000 ? 60,000 tons per year. Methanol-to-Jet (ATJ) Fuel is a sustainable aviation fuel (SAF) produced by converting methanol?derived from biomass, CO?, or natural gas?into jet fuel hydrocarbons via catalytic or thermochemical processes. It serves as a renewable alternative to conventional kerosene-based jet fuels. The Methanol-to-Jet (ATJ) Fuel market is growing rapidly due to global decarbonization initiatives and aviation sector commitments to achieve net-zero emissions. Technological advancements in methanol synthesis and catalytic conversion are improving yield and reducing cost. Governments in the U.S., EU, and Asia-Pacific are promoting SAF blending mandates, creating new investment opportunities. However, high capital costs and limited large-scale facilities remain challenges. In the long term, ATJ fuel is expected to capture a significant share of the SAF market as methanol becomes increasingly sourced from renewable carbon.

The global Methanol-to-Jet (ATJ) Fuel market size was estimated at USD 1480.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.50% during the forecast period.
