Abstracts

Methionine is a protein-based amino acid and lipotropic compound that helps with metabolism and breaks down fat. It contains α -amino group, α -carboxylic acid group and an S-methyl thioether side chain. Methionine is classed as an essential amino acid and cannot be synthesized by the body itself. The methionine market for food is primarily driven by the growing global demand for protein-rich diets and the need for animal nutrition enhancement. Methionine is a vital amino acid used as a feed additive to promote optimal growth and health in livestock and poultry. However, a significant challenge in this market is the fluctuation in raw material prices, which can impact the cost of methionine production. Additionally, there is a rising focus on sustainable and eco-friendly practices in food production, which has led to the exploration of alternative protein sources, posing a potential challenge to the methionine market's growth in the long term.

The global Methionine for Food market size was estimated at USD 565.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
