Report Overview

Methotrexate is a well-established chemotherapy agent and immunosuppressant primarily used to treat certain cancers, autoimmune diseases (such as rheumatoid arthritis and psoriasis), and ectopic pregnancies. It functions as an antimetabolite by inhibiting dihydrofolate reductase, disrupting DNA synthesis and cell proliferation. The drug is available in various formulations, including oral tablets, injectable solutions, and high-dose intravenous forms for oncology use. Its broad therapeutic applications, cost-effectiveness, and inclusion in essential medicine lists by organizations like the WHO contribute to its sustained demand. The market for methotrexate remains robust due to rising cancer prevalence, increasing autoimmune disorder diagnoses, and its continued use as a first-line treatment in many clinical guidelines. However, competition from biologic therapies and biosimilars, along with concerns about toxicity and required monitoring, influences prescribing trends and market dynamics.

The global Methotrexate market size was estimated at USD 546.53 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 2.73% during the forecast period.
