Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Methoxypolyethylene Glycol (mPEG) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Methoxypolyethylene glycol (mPEG), structural formula $\text{CH}_3\text{O}(\text{CH}_2\text{CH}_2\text{O})_n\text{H}$, $n=10-120$. Methoxypolyethylene glycol is generally prepared by the reaction of methanol and ethylene oxide under appropriate catalysts, and has good water solubility and biocompatibility. The polyethylene glycol chain in its molecular structure gives it excellent solubility, while the presence of methoxy groups reduces its toxic effects on organisms. Methoxypolyethylene glycol (mPEG) is an important derivative of polyethylene glycol (PEG). With its excellent water solubility, lubricity, biocompatibility and environmental protection characteristics, the market demand for mPEG continues to expand, and it occupies an important position in the fields of building materials, medicine, cosmetics, etc. The main manufacturers of mPEG in the world include Dow, LOTTE Chemical, Viswaat Chemicals, etc. The production of mPEG depends on raw materials such as ethylene glycol, and fluctuations in raw material prices may affect production costs. With the emphasis on environmental protection and sustainable development, the development of environmentally friendly mPEG products will become a trend and promote the sustainable development of the industry.

The global Methoxypolyethylene Glycol (mPEG) market size was estimated at USD 710.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.00% during the forecast period.
