### Report Overview:

In the chemical industry, Methyl carbamate (also known as urethylane or methylurethane) is a chemical molecule that is the most basic carbamic acid ester. Methyl carbamate is a colourless substance. Methyl carbamate is widely employed as a reactive intermediate in the polymer and textile industries. Methyl carbamate is developed in the textile industry to make dimethylol methyl carbamate-based resins that are used as durable-press finishes on polyester-cotton blend fabrics. The treated fabrics hold their crease angles well, resist acid souring in commercial laundries, don't retain chlorine, and are flame-resistant. In addition to medicines, pesticides, and urethane, methyl carbamate is implemented in the production of urethane. Insecticides containing N-methyl carbamates are commonly implemented. They inhibit cholinesterase without having a cumulative effect.

The Global Methyl Carbamate Market Size was estimated at USD 574.18 million in 2023 and is projected to reach USD 734.94 million by 2029, exhibiting a CAGR of 4.20% during the forecast period.
