Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Methyl Ethyl Sulfide competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Methyl Ethyl Sulfide production reached approximately 180 kilotons with an average global market price of around US\$ 3400 per ton. Methyl Ethyl Sulfide is a volatile, flammable organosulfur compound consisting of a sulfur atom bonded to a methyl and an ethyl group. It appears as a colorless to pale yellow liquid with a strong, unpleasant odor often described as garlic- or cabbage-like, characteristic of many low-molecular-weight sulfides. It is used mainly as an intermediate in organic synthesis, particularly in the production of other sulfur-containing compounds, and can also occur as a trace impurity in petroleum and natural gas. Due to its volatility and odor, it is sometimes considered for use as an odorant or chemical marker in leak detection.

The global Methyl Ethyl Sulfide market size was estimated at USD 607.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.90% during the forecast period.
